Search Performance Report

VS Health Benefits | Google Search Console, June 14 – September 13, 2026 | Prepared September 15, 2026

329	66,342	0.50%	28
CLICKS	IMPRESSIONS	CLICK RATE	AVG. POSITION
38 last week, best since June	up ~6x over the quarter	the number to fix	was 55 in July

Read this first. The data ends September 13, the same day the trucking rebuild went live. Almost nothing in here reflects the last round of work. What it does show is where demand is sitting and going unclaimed. Judge the recent changes from the export you pull around October 10.

The one-line read

Google now shows your site 66,000 times a quarter and you convert half a percent of it. You are no longer invisible; you are on page three. Every item below is about turning existing impressions into clicks, in order of what it is worth.

1 Qualifying life events — 1,357 impressions, 0 clicks

Your best lead audience and you get nothing from it. Someone searching this just lost coverage, got married, or had a baby. They can enroll **today**, not in November. You already built a special enrollment checker and nobody sees it. Your page sits at 33rd.

SEARCH	IMPRESSIONS	POSITION	CLICKS
qualifying life event	224	40	0
qualifying event for health insurance	89	38	0
qualifying life event for insurance	76	40	0
qualifying life events for health insurance	72	36	0
59 searches in this family, combined	1,357	~38	0

Do: rebuild the qualifying life events page around the plain phrases people actually type, and put the checker tool in front of it.

2 Open enrollment leaks at the top

This is your Q4 engine, and it is already ranking well. The problem is that Google answers the date on its own results page, so nobody needs to click.

PAGE OR SEARCH	IMPRESSIONS	POSITION	CLICKS	CLICK RATE
"when is open enrollment for health insurance 2027"	1,047	8.7	2	**0.19%**
/blog/aca-open-enrollment-2027-guide	6,872	14	24	**0.35%**
/health-insurance-open-enrollment-faq	1,595	18	6	**0.38%**

Do: the new titles shipped September 11 — leave them alone for three weeks. Then give searchers what a snippet cannot: state deadlines, what changed with the subsidy cliff, and the December 15 trap. Push the deadline reminder signup hard from late October.

3 You are invisible for "calculator" searches

Your calculators are the pages that actually capture leads, and you are nowhere for the way people name them. The likely cause is one word: your page says ACA, these people say Obamacare.

SEARCH	IMPRESSIONS	POSITION
health care subsidy calculator	130	71
obamacare subsidy calculator	102	53
obama care subsidy calculator	97	63
health insurance subsidy calculator	88	57
obamacare subsidies calculator	77	56

Do: add Obamacare wording as a section and FAQ on the existing calculator page. Not a new page — that would split the two against each other.

4 Small business: biggest commission, weakest showing

CLUSTER	SEARCHES	IMPRESSIONS	CLICKS	AVG. POSITION
Small business / group / ICHRA	184	3,471	**1**	47
Local (Miami, Broward, Coral Springs…)	103	1,840	**0**	39

More pages will not fix this. Local results are won in the map pack, which runs on Google Business Profile activity and reviews — you have 42 at 5.0, which is a real asset you are under-using.

5 Dental and vision: stop feeding it

8,917 impressions. Zero clicks. Average position 68. That is 13% of everything Google shows you, producing nothing, in a category owned by carriers and worth little per lead. The state pages are already hidden from Google. Leave it there and spend the effort on the four items above.

What to add

1. **A 2027 ACA income limits page.** You rank 9th for "aca subsidies 2027 income limits" with no page built for it. A 400% federal poverty level chart by household size, the cliff explained, feeding into your calculator. This family explodes between November and January.
2. **Obamacare wording on the subsidy calculator** (see item 3).
3. **Raleigh depth.** "health insurance for truck drivers raleigh" now sits at 22nd, and Raleigh keeps appearing. The page is thin.
4. **Reviews and weekly Google Business Profile posts** — the only real lever on items 4 and on brand searches.

Trucking status

> **Demand confirmed, rankings still the blocker.** 76 trucking searches, 5,765 impressions, 8 clicks, average position 42. The head term "health insurance for truck drivers" carries 1,232 impressions at position 52. The September 13 rebuild — answer-first page structure, corrected headline, five broken links fixed, three new driver guides — targets exactly this. It needs four to six weeks before the data means anything.

What search data cannot tell you

None of this shows which pages produce paying clients. Your calculators tag every lead by source (*subsidy_calculator*, *trucker_cost_calculator*), so GoHighLevel can rank this list by revenue rather than clicks. That is the next thing worth doing.

Next checkpoint

Pull a fresh export around **October 10** and check three things: whether "health insurance for truck drivers" moved off position 52, whether the three new driver guides picked up impressions, and whether mobile clicks rose after the table overflow fix. Mobile already converts at twice the desktop rate.
